

One Voice for BroadSoft

Comprehensive Offering for BroadSoft Business

AudioCodes One Voice for BroadSoft is a comprehensive offering of hardware and software products that complements the core BroadSoft hosted UC and SIP trunking solutions. Together, BroadSoft and AudioCodes enable service providers to deliver superior hosted communications services to their business customers.

Key Benefits:

- **Increased operational efficiency** - a single source for all voice solutions
- **Increased productivity** - automatic configuration and enhanced service assurance
- **Improved customer retention** - reliable, high quality voice with real-time monitoring
- **Accelerated deployment** - seamless interoperability and centralized management

Highlights:

Accelerating the Transformation to All-IP

Comprehensive offering of robust products that facilitates the move to All-IP networks

Optimized Offering for Mid-Market and SMB

Extensive interoperability, built-in Quality of Service mechanisms, service survivability and resiliency

Enabling Turnkey Solutions

Complete suite of certified CPEs for BroadWorks and BroadCloud - ATAs, IP phones, SBCs and media gateways

Optimized Offering for Mid-Market and SMB

Mid-market enterprises and SMBs offer significant business potential for hosted UC service providers. AudioCodes One Voice for BroadSoft portfolio leverages the company's extensive experience and field-proven products to deliver solutions that are optimized for the needs of small, mid-size and large enterprises.

- Unique technology delivers superior user experience and **high voice quality**
- AudioCodes VoIPerfect™ technology **optimizes voice quality** and ensures high voice quality over WAN connections
- **Zero-touch provisioning** reduces deployment time and cost
- Wide-ranging **interoperability** with TDM and SIP-based devices and networks
- Extensive management and monitoring capabilities **simplify troubleshooting** and reduce downtime

Accelerating the Transformation to All-IP

AudioCodes One Voice for BroadSoft includes a **comprehensive offering of robust products** to simplify the move to All-IP. With their field-proven interoperability, scalability and reliability, AudioCodes' products enable customers to migrate from their legacy infrastructure at a controlled pace.

- **Seamless connectivity** with extensive SIP and TDM interoperability
- Hybrid platforms deliver **future-proof solutions** with investment protection
- **Wide range of highly scalable products** to fit all deployment scenarios
- Comprehensive support for auto-provisioning and **centralized control** of the migration process

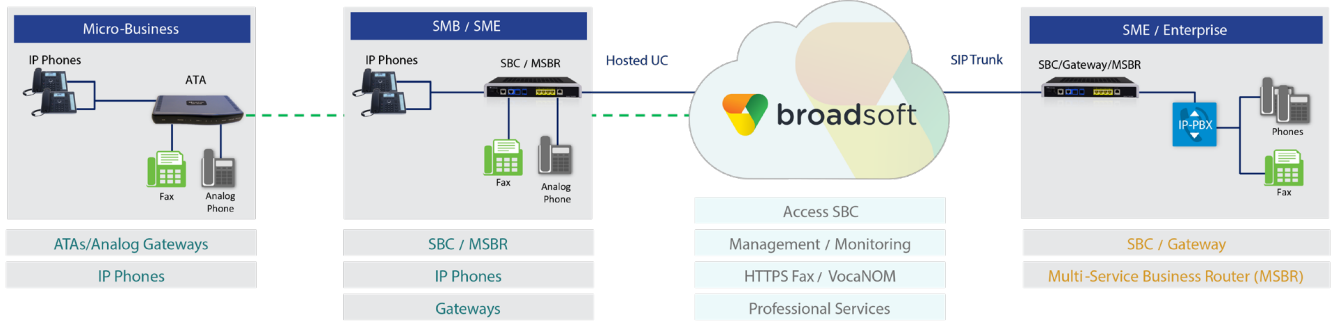

Enabling Turnkey Solutions

AudioCodes One Voice for BroadSoft portfolio offers a broad array of certified CPEs for BroadWorks and BroadCloud environments. These include analog telephony adapters (ATAs) and analog gateways, IP phones, session border controllers (SBCs) and media gateways.

- **Extensive certification** with BroadWorks and BroadCloud
- Minimize the number of vendors needed to **deliver a turnkey solution**
- **Integrated PacketSmart** probe on SBCs, gateways and ATAs
- **Full lifecycle management** of voice elements

Hosted UC

SIP Trunking

AudioCodes' Offering for BroadWorks and BroadCloud

IP Phones - Suite of IP Phones delivering superior HD voice quality and seamless management

ATAs & Analog Gateways - Delivering connectivity for legacy analog phones and fax machines

SBCs and Gateways - Wide range of products that are highly interoperable and scale efficiently from a few sessions up to thousands of sessions

Business Routers - AudioCodes' family of Multi-Service Business Routers (MSBR) complements outstanding gateway and SBC capabilities with multi-WAN support and advanced data capabilities while maintaining consistent performance

Access SBCs - Powerful perimeter control, available as hardware, software and NFV-compliant virtualized solutions

Monitoring and Management - Advanced management tools for mass provisioning and embedded monitoring agent for real-time call analysis and troubleshooting

Applications - Cloud-based applications for enhanced UC productivity, including HTTPS fax and voice-activated dialing (VocaNOM)
