

AudioCodes RX-SWITCH

Seamless BYOM and content sharing experience for AudioCodes solutions for Microsoft Teams Rooms

Microsoft Teams Rooms transforms the modern workplace by seamlessly connecting in-person and remote participants, fostering collaboration with advanced audio, video and content-sharing capabilities. It's the ideal solution for organizations seeking to bridge the gap between hybrid teams and create a more inclusive meeting experience with real meeting equity.

But in spite of its soaring popularity, not everyone uses Microsoft Teams. What happens if you have an important meeting with a client or a business partner who uses a different video conferencing platform?

You need the **AudioCodes RX-SWITCH**.

What Is the AudioCodes RX-SWITCH?

The **AudioCodes RX-SWITCH** is a compact, easy-to-install solution that enables organizations using Microsoft Teams Rooms with the **AudioCodes RXV200 Android Hub** to support meetings hosted on any video conferencing platform. It's a highly cost-effective way to deliver a seamless Bring Your Own Meeting (BYOM) experience, ensuring flexibility and inclusivity for all your hybrid collaboration needs.

How Does It Work?

Getting started with the AudioCodes RX-Switch is simplicity itself:

- Install the AudioCodes RX-SWITCH in your Microsoft Teams Room.
- Connect a laptop running the alternative video conferencing application (such as Zoom or Cisco Webex) to the AudioCodes RX-SWITCH with a single USB Type C cable. You don't need an additional HDMI cable between the laptop and the TV screen.
- Select BYOM mode on the **AudioCodes RX-PAD Meeting Room Controller**. And if you want to share content from your laptop in a regular Teams meeting, you can simply select the content sharing mode on the RX-PAD without needing an extra cable.
- The audio and video streams from the laptop will appear on the meeting room's speakers and TV screen for a completely natural and immersive meeting experience.

Highlights
